SKILLS

- Python
- Java
- JavaScript y React
- HTML y CSS, Tailwind CSS
- Git
- SQL y PostgreSQL
- C++
- English-A2

EDUCATION

- Systems engineering student- Universidad del Valle.
- Technician in management systems-Sena environmental

METHODOLOGIES

- Scrum
- Kanban

GREETING AND PRESENTATION

Hello! I am Juan David Ramirez Grismaldo, a systems engineering student at the Universidad del Valle, Tuluá headquarters. Passionate about programming, I stand out for my constant growth mentality and enthusiasm for facing new challenges. Throughout my studies, I have demonstrated creative and efficient problem-solving skills, both individually and as a team. My goal is to become a versatile programming professional, capable of tackling complex projects and generating innovative solutions. I am excited for the future and eager to contribute with my passion and dedication. Thank you!

PROJECTS AND WORKS

BOOKFINDER – LIBRARY AND BOOK RESERVATIONS APP:

I built this app using React with Tailwind CSS for the frontend and Node with Express for the backend. The application focuses on viewing books from Universidad del Valle, allowing users to see reviews, ratings and reserve books for specific dates. The goal is to improve the user experience by accessing and managing library information efficiently.

Repository: <https://github.com/JUANDA18RG/Proyecto-Desarrollo.git>

VILTOAPP – JOINT WORK MANAGEMENT AND WORK ORGANIZATION APPLICATION:

Developed an application with React, Tailwind CSS and Node with Express, using Firebase and Liveblocks to provide an out-of-the-box asynchronous experience. The app focuses on project management, allowing users to create and track tasks through columns that represent different stages of completion. The Liveblocks integration allows instant updates between users, offering an efficient and collaborative solution for project organization.

Repository: <https://github.com/JUANDA18RG/Proyect-ViltoApp.git>

MONKEYMUSIC – APPLICATION TO PLAY MUSIC AND BUILD YOUR PLAYLIST TO YOUR TASTE:

I built this app using React, Tailwind CSS, and Node, leveraging Firebase for logging via GitHub, Facebook, and email. The app allows you to enjoy music on computers or mobile devices, offering various categories and genres for a personalized experience. Additionally, users can add their favorite songs to their playlists, thus enhancing the music experience.
